

Car cleaning products, car wax

Car wax is a protective coating applied to the external coat of the automobile so as to prevent oxidation. Car wax does not prevent from bird droppings or heavy objects falling which would still scratch the card, the only purpose of this protective layer is to protect from oxidation. For a natural shine and protection from the harsh environment there is nothing better than using car wax.

Car wax forms a thin transparent layer over the cars exterior paint thus forming a primary protection against any harm caused to the automobile. This layer helps in covering minor scratches and stone chips by making them less visible. Car wax also reduces corrosion due to water as it forms a seal on the pain through which water cannot enter. Car wax has to be reapplied regularly and is not permanent. The life of a good quality car wax is 3 to 4 months thus there is a need for reapplication every 3 months.

Before a car is waxed it is preferred to get it buffered with an electric buffer to remove minor scratches and nay irregularity in the paint, after buffering only it is advisable to wax the car which should be repeated every three months. The requirements to wax your car, is a good quality wax, a clean towel and a small sponge. Also your car needs to be clean and dry before you start waxing it. It is advisable to ensure you buy a non abrasive car wax so your car does not get damaged in any way Read the directions clearly given on the package and first test it on a small area.

While using liquid [car wax](#), first shake the bottle well, and put small amount of the wax on the sponge to apply evenly on the car. A general approach is to start with the top and move the bottom panels subsequently as it is known that the bottom panels of a car are always dirtier. it is preferable to make a thin and even layer all over the car and thick layers should be avoided as due to that the shine is lost. Waxing any other part other than the painted metal part is not a good idea as it will leave a white mark all over the rubber or glass parts.

After applying the wax evenly all over, wait for a couple of minutes before buffing it for a nice and shiny look. Car wax if used regularly is considered beneficial for the car as it reduced scratches and gives the car a nice shiny look.
