

The Best Way To Do Dog Food Comparison

Today, dog owners have many options of food and treatments for their dog. There are different varieties and many brands available in the market but the main problem is to compare the different dog food brands and choose the best food for your pet. You will need some basic information about the nutritional requirements of dogs if you want a successful dog food comparison. Some of the important information is given below to guide you about your dogs basic nutritional needs.

Protein is one of the major constituents of dogs food. It is very necessary for the muscles, coat, nail and skin of the dog. There is not a standard protein amount which should be given to the dog and the protein requirements of dogs may vary based on their age and level of activity. High level of protein is recommended to the dogs including sick dogs, sled dogs, puppies and pregnant or lactating dogs. The dogs with high level of activity require 25% to 35% amount of protein in their food. An average dog needs about 18% of protein regularly. Protein is not good for the dogs having kidney problem so, protein restricted diet should be given to dogs with kidney diseases.

Dogs require a very little amount of carbohydrates in their daily diet but most of the prepared dry dog food contains amount of carbohydrate ranges from 30% to 70%. Carbohydrates are important for dogs because starch assists in the formation of kibble and therefore, the kibble brands usually have high percentage of carbohydrates. Therefore, it is very important to select the food that is totally up to the nutrition requirement of your dog and it is only possible if you do a good dog food comparison.

While making the dog food comparison you will find that the major source of energy in the dog food is provided by fats. The amount of fats in food depends on the age and level of activity of the dog. The pregnant or lactating dogs and puppies required 17 percent fats in they daily diet. Active dogs or high performance and the average adult dogs should require fats 15% and 20% respectively.

A high amount of fats is required to the sled dogs i.e. 50 percent daily. For providing high nutritional diet to your dog, you have to consider the dog food comparisons very seriously and you should also remember that if your dog needs fats then what are the various sources of fats. You should also give essential fatty acids to your dogs such as Linoleic acid. Apart from that, for the healthy immune system of your pet fats are very important. For the health of your dog, fibre is important. Moreover, pumpkin and Metamucil are the best source of fibre.
