

## When you need storage on a budget

Quonset huts have a lot of uses. It has been used as a hangar, a military barracks, a house and much more. Today it is mostly used for storage, whether it be for personal items or cars or farm equipment. So not only is it versatile, but it is also affordable. Compare it to lumber, steel beams or masonry and you will find that a Quonset hut is a much more affordable option. Quonset huts are not about looking pretty, they are meant to protect whatever needs a shelter and do it while not breaking the bank. It manages to do this in a few ways. Quonset huts do not need a lot of raw materials to be built. It is made up of a bunch of pieces corrugated metal that are bent into arches. There are cross beams down at the end that add to the structural integrity, but the corrugated steel really makes these structures sound. So instead of other types of construction that rely on support beams, then siding and sheet rock or big logs or rocks and concrete, a Quonset hut is made of simple materials that come at a reasonable cost. Needing less materials also means that you do not need to invest as much money into transporting the materials. The assembly time is a lot lower as well which also saves you on manual labor. A team can be sent from most Quonset hut manufacturers that will come and assemble the Quonset hut in a matter of hours, unlike the manual labor for other styles of construction that need to be hired for at least a month. Any one of the factors of materials, transport and labor would make the Quonset hut more affordable, but all three together make Quonset huts a great affordable option.

The portability of the Quonset hut made it especially useful to the United States Army back in World War Two. Quonset huts were used for everything in the army at that time. When they needed to move the troops, the Quonset huts were able to be taken to the next location to continue to serve the troops. That has not changed, you can take your Quonset hut where you need it. It is much easier to ship than other buildings and it means you do not have to build a new one. It would be useless to have excess in one place and a need in another. That is the beauty of the Quonset hut, it is about the practicality of doing the job without breaking the bank.
