

Do You Know How To File An Internet Domain Registration

It is not difficult to process an Internet domain registration. Anyone with access to the [Internet](#) can register one or several domain names. Boiled down to the simplest terms, one needs to select a domain registrar, choose a domain name, enter the required registration information, and provide payment, as required by the registrar. Of course, lack of knowledge of the basic terminology or about how the process of Internet domain registration is managed can make it seem anything but simple. In fact, it can be intimidating. Registrar, domain, domain name...what exactly does it mean? If you do not think you have the full concept, this article may be helpful.

The term domain refers to the actual website. The domain name is the address that allows people to access the site. A domain registrar is an approved company, or website, which will collect the required information for Internet domain registration, submit your domain name to the central database, and maintain your domain registration records. You have a broad choice of sites which function as domain registrars. A Web host will not only process your Internet domain registration, but will help you build and maintain a website as well. Using a Web host for Internet domain registration may be a more comfortable option for those with limited technical knowledge.

Sometimes the part of the Internet domain registration that seems the easiest, like creating your domain name, may be the more difficult than expected. Like postal addresses, Internet domain names must follow a specified format and be unique. The format requires two parts: the name, usually preceded by www., followed by an extension. The most common extension is .com, but there are several others available. An example might be www.myownwebsite.com. The name should be reflective of the website it will represent. The combination of the name and extension cannot be registered by anyone else. ICANN is the corporation which sees to the integrity of Internet domain registration. Access to the information stored from the Internet domain registration process is available on the InterNIC website. The registry itself is WHOIS.

The good news is you can check the availability of your chosen name on the registrar website. If your choice is not available, the search may provide alternate names, which you can select. You can also continue to search until you find one that is just right. Once you have selected your domain name, the rest is easy. Fill out the required information and file. File the form. Your Internet domain registration is complete and your registrar will alert you when it is ready to use.
